

DEPARTMENT OF HEALTH

IN RE:

OFFICE OF MEDICAL MARIJUANA USE

_____ /

RULES WORKSHOP

**CERTIFIED
ORIGINAL**

DATE TAKEN: October 29, 2025
TIME: 9:00 AM – 10:37 AM
LOCATION: Holiday Inn
 2003 Appalachia Parkway
 Tallahassee, Florida 32301

- 1 AGENDA ITEMS and ADDITIONAL PANNEL MEMEBERS
- 2 64-4.205 Standards for Production of Edibles - Ben
- 3 LaBelle and Melissa Passet
- 4 64.4.209 MMTC Solvent-Based Extraction - Ben LaBelle and
- 5 Melissa Passet
- 6 64.4221 MMTC Seet-to Sale Tracking System Integration -
- 7 Josh Strums
- 8 64.4-222 MMTC STS Tracking System Procedures - Josh
- 9 Strums
- 10 64.4-223 Caregiver Background Screening and Request for
- 11 Close Relative Status - Todd Schimpf
- 12 64-4.224 Dosing and Supply Limits for Medical Marijuana
- 13 - Todd Schimpf
- 14
- 15
- 16
- 17
- 18
- 19
- 20
- 21
- 22
- 23
- 24
- 25

1 APPEARNCES

2 OMMU:

3 MEREDITH HAYES, RULES COORDINATOR

4 ALICIA FRINGER, DEPUTY DIRECTOR

5 JAMIE NOBLES, ASSISTANT DIRECTOR

6 BREANNE RAMM, LEGISLATIVE POLICY ANALYST

7 ALYSSON BRADLEY, INTERNAL GENERAL COUNSEL

8 MELISSA PASSETT, VARIANCE MANAGER

9 MEGAN WILLIAMS, MANAGER

10 TODD SCHIMPF, COMMUNICATIONS MANAGER

11 AUSTIN BRENCH, SEED-TO-SALE

12 CASSIE HURLEY, DATA SYSTEMS MANAGER

13 JOSHUA STURMS, PROJECT MANAGER

14 BENJAMIN LABELLE, FIELD OPERATIONS MANAGER

15 DR. JOHN KABA, ENVIRONMENTAL MANAGER

16

17 IN ATTENDANCE:

18 ASHLEY UBALDINI, COMPLIANCE MANAGER, INSD

19 CHARLES BAILEY, SUP OPERATIONS, SUNBURN

20 DEVIN BAXTER, ATTORNEY, BAXTER LAW

21 TIM GUNTHER, COMPLIANCE DIRECTOR, THE FLOWERY

22 JESS ENGLE, SUP COMPLIANCE, GOLDFLOWER

23 TABITHA KROL, REGULATOR AND SENIOR MANAGER,

24 PARALLEL

25 SAVANNAH BAILEY, COMPLIANCE MANAGER, TRULIEVE

1 IN ATTENDANCE:

2 AMANDA MUSGRAVE, COMPLIANCE DIRECTOR, SUNBURN

3 BRADLEY BUTLER, SR., ATTORNEY, PANZA MAURER

4 MICHELLE FINCH, OPERATIONS AND COMPLIANCE, SURTERRA

5 MICHAEL CMUTS, COO, THE FLOWERY

6 GENE MCGEE, PARTNER, SUNRISE CONSULTANTS GROUP

7 DOUG BELL, ATTORNEY, CURALEAF

8 AUTUM SANGREY, COMPLIANCE, AYR WELLNESS, INC.

9 RYAN FINGERHUT, PROJECT MANAGER, GREENE STREET

10 TJ MORTON, ATTORNEY, LOCKWOOD LAW FIRM

11 CRAIG SIMPSON, ATTORNEY, LOCKWOOD LAW FIRM

12 JENNIFER TSCHETTER, ATTORNEY, CARLTON FIELDS

13 RON WATSON, LOBBYIST, WATSON STRATAGIES

14 CHRISTINE SENNE, ATTORNEY, FLORIDA MEDICAL

15 MARAJUANA TRADE ASSOICATION

16 JODI JAMES, PRESIDENT, FLORIDA CANABIS ACTION

17 NETWORK

18 JENNIFER MAKRIS, FLORIDA CANNABIS ACTION NETWORK

19 CARLA ASHBURN, MMCARE FLCAN

20 ALEX JOHNSON, OFFICINALIS, FLCAN

21 ERICK VELEZ, DIRECTOR OF OPERATIONS, AYR WELLNESS,
22 INC.

23 MATT LABRAYERE, VP MANUFACTURING, AYR WELLNESS,
24 INC.

25

1 (Thereupon, the workshop commenced at 9:00 AM.)

2 COORDINATOR HAYES: Good morning. This is a
3 workshop on Rules 64-4.205, Standards for
4 Production of Edibles; 64-4.209, MMTC Solvent Based
5 Extraction; 64-4.221, MMTC Seed-To-Sale Tracking
6 System Integration; 64-4.222, MMTC STS Tracking
7 System Procedures; 64-4.223 Caregiver Background
8 Screening and Request for Close Relative Status;
9 and 64-4.224, Dosing and Supply Limits for Medical
10 Marijuana.

11 This workshop is being conducted on October
12 29th, 2025, at Holiday Inn Tallahassee East Capitol
13 University, 2003 Apalachee Parkway, Tallahassee,
14 Florida 32301.

15 I am conducting the workshop for the
16 Department. My name is Meredith Hayes, and I am
17 the Administrative Rules Coordinator for the Office
18 of Medical Marijuana Use. Our address is Florida
19 Department of Health, 4052 Bald Cypress Way, Bin
20 M-01, Tallahassee, Florida 32399.

21 I am joined by Allyson Bradley, Interim
22 General Counsel, and Breanne Ramm OMMU Legislative
23 Policy Analyst.

24 As we move through each Rule, we will
25 introduce program staff who specialize in each Rule

1 subject matter to the panel. These panel members
2 may rotate throughout the workshop based on rule
3 being discussed. This workshop is being conducted
4 in accordance with section 120. 54 Florida
5 Statutes. The notice for this workshop was
6 published in volume 51, number 197 of the Florida
7 Administrative Register on October 9th, 2025.

8 The purpose of this workshop is to allow the
9 public an opportunity to participate in the rule
10 making process. Before we begin, we ask that all
11 comments that include suggested rule language be
12 submitted in writing to the OMMU rules inbox at
13 OMMUrules@FLhealth.gov before the end of the
14 comment period, which will be announced at the end
15 of the workshop.

16 Please be advised that this workshop is being
17 transcribed by a court reporter.

18 This rulemaking initiates nonemergency
19 rulemaking to replace the emergency rules adopted
20 by the Department to implement section 381.986
21 Florida Statutes pursuant to chapter 2025-199,
22 section 14 Laws of Florida. These rules set forth
23 the requirements for medical marijuana treatment
24 centers, qualified patients, and caregivers.

25 For the purpose of this workshop, we will

1 begin referencing the existing emergency rules as
2 the development draft.

3 If you've indicated on the sign-in sheet that
4 you wish to comment on a Rule, you will be called
5 in the order in which you signed in to speak on the
6 subject rule indicated. When your name or
7 affiliation is called, please approach the
8 microphone at the front of the room. We ask that
9 you state your name and the organization you
10 represent.

11 In the interest of time, we ask that you do
12 not repeat the position of the previous speakers.
13 You may, however, for the record, state that you
14 agree with one or more of the previous speakers.
15 We ask that you limit your comments to no more than
16 about three minutes.

17 At this time, we would like to open the floor
18 for comment on Rule 64-4.205 Standards for
19 Production of Edibles, and we will only be
20 accepting comments on this Rule at this time.

21 Joining me is Benjamin LaBelle, Field
22 Operations Manager, and Melissa Passett, Variance
23 Manager.

24 Devin Baxter.

25 MS. BAXTER: Good morning. Devin Baxter on

1 behalf of several MMTCs and CMTLs. I have a couple
2 comments on this Rule.

3 First, well, we understand that the statute
4 prohibits color additives. We'd like a little bit
5 more flexibility to utilize natural ingredients
6 that are not added for color, such as natural fruit
7 juices. The language in the Rule that requires the
8 edibles to be semi-translucent makes it hard to
9 utilize things like fruit juices, and we think
10 that's overly restrictive compared to the statutory
11 language.

12 And then when it comes to variance approvals,
13 we've seen a lot of discrepancies between what is
14 considered semi-translucent and what's not. It
15 makes it tough for MMTCs. We're having to adjust
16 our formulas and resubmit. So, we'd like a little
17 bit more flexibility there.

18 And then, in paragraph 13, which deals with
19 recalls of edibles, we'd ask that the Department
20 distinguish between class one, two, and three
21 health hazards with different notification levels
22 for those recalls, similar to the process that the
23 FDA does for recalls.

24 Thank you.

25 COORDINATOR HAYES: Thank you.

1 Ashley from INSD.

2 MS. UBALDINI: Good morning. I'm Ashley on
3 behalf of INSA.

4 Devin covered some of what I was going to
5 speak on, specifically with regards to adding the
6 natural flavor additives.

7 Some of the other things that we wanted to
8 speak on is we would urge the Department to allow
9 for additional shapes. We believe we're far enough
10 along in the program to remove some of the
11 needlessly restrictive regulations, like they must
12 be one of seven shapes.

13 Additionally, we would like to recommend that
14 we remove restrictions not being a primary color.
15 So, 7(e) reads, "MMTC shall not produce or dispense
16 edibles that are a bright color," removing that
17 section for a primary color.

18 Further, under number 12, we recommend
19 revising the current restriction that prohibits
20 providing any food aside from complimentary water.
21 A complete prohibition on food may be unnecessarily
22 broad, particularly in instances like holidays like
23 Halloween. We're offering complimentary small
24 commercially packaged items might be appropriate
25 and well received from our patients. If the intent

1 for this restriction is to prevent the distribution
2 of infused products or mitigate risk associated
3 with sampling uninfused items, we suggest
4 clarifying that language specifically address those
5 concerns rather than maintaining a blanket
6 restriction.

7 And that's all from us. Thank you.

8 COORDINATOR HAYES: Thank you.

9 Tim Gunther.

10 MR. GUNTHER: Good morning. Tim Gunther from
11 The Flowery.

12 I agree with Ms. Baxter, Ms. Ashley, in
13 their comments, just so you know.

14 Two things; one is, add another category of
15 permissible edibles to subsection five, the Rule
16 Beverages. MMTC that produce edibles hold the
17 necessary permit today to produce that with the
18 FDACS food establishment permit. Beverages and
19 liquids are a common form of medication
20 disbursement in pharmacies today.

21 So, you see things being offered where people
22 don't either want to take pills or edibles, and
23 they'd rather consume through a beverage. And
24 there are currently TC beverages in Florida today
25 offered through other partners on the hemp side.

1 And they're all over the place. And so, we would
2 like to be able to offer that in a regulated market
3 within that. So customers don't get confused why
4 they can buy products at a convenience store that
5 contain THC but come into an MMTC where they get
6 tested and all that.

7 The other, Ashley pointed on it, but either
8 strike through or modify subsection 12, prohibition
9 of offering of food and beverages. Again, it would
10 be nice to offer a complimentary coffee or other
11 things. And just tying on to what Ashley said
12 regarding the availability to provide other food
13 items such during Halloween or other festivities.

14 Thank you.

15 COORDINATOR HAYES: Thank you.

16 Jodi James.

17 MS. JAMES: Jodi James with Florida Cannabis
18 Action Network.

19 Wow. I hadn't even thought about the food
20 being here. Our organization is primarily an
21 education organization, and we would love to be
22 able to use the MMTC, some of which have large
23 spaces to do events. But nobody's coming in
24 Florida if I can't have a catered food. So, we end
25 up going other places, libraries and things like

1 that when the people we really want to be educating
2 are already in the dispensaries. So yes, on that
3 one.

4 I wanted to talk about CBD as an additive and
5 figure out how we get there. One of the things I'm
6 going to talk about a little bit later is the idea
7 that we're dispensing less and less low THC and CBD
8 does qualify as a product. There's a lot of
9 products out there. If these could be sourced
10 products because they are a food approved food
11 products through FDACS.

12 If they can be sourced and then we can get it
13 right in the seed-to-sale tracking, then patients
14 are going to be able to get affordable CBD and
15 that's going to have them in the market, here in
16 the medical market, as opposed to patients having
17 to get part of their medicine in one market and
18 then go someplace else for supplements. So that
19 was my thought is let's get CBD as an approved
20 additive here.

21 Thanks.

22 COORDINATOR HAYES: Were there any further
23 comments on that Rule?

24 Okay. Next, we will be moving to Rule 64-
25 4.209, MMTC Solvent-Based Extraction. And we will

1 only be accepting comment on this Rule at this
2 time.

3 Joining the panel is Dr. John Kaba,
4 Environmental Manager.

5 Devin Baxter.

6 MS. BAXTER: I have a few comments on this
7 Rule of Solvent-Based Extraction. Paragraph 11(a)
8 requires that all employees performing solvent-
9 based extraction have to have certain training
10 before they do so, and that that training is
11 obtained from the manufacturer of the closed loop
12 system.

13 We request that the Department align the
14 training requirements from this Rule with the
15 regulatory frameworks used by OSHA and NFPA and FDA
16 GMP standards, which emphasize documented
17 competency rather than certain manufacturer
18 provided training.

19 So, this Rule presents a bit of a challenge
20 where the equipment manufacturer either doesn't
21 offer formal or ongoing training programs, or maybe
22 they've gone out of business, or there's a
23 significant delay in getting the manufacturer to
24 provide the training. So, we'd like to be able to
25 do equivalent training from someone other than the

1 manufacturer.

2 On subsection, subparagraph 1(f), where it
3 defines organic solvents, the requirement is that
4 it's identified as a class three solvent. And the
5 Rule further requires a minimum purity of 99.5%
6 with a CoA from the manufacturer. We think this
7 language, when applied strictly, might prohibit the
8 use of denatured ethanol and require pure ethanol.

9 So denatured ethanol is a combination of
10 ethanol and heptane. That is class three. They're
11 pure but it's combined together and requiring the
12 use of undenatured or pure ethanol imposes a
13 significant and unnecessary burden on MMTC because
14 pure ethanol is subject to a federal excise tax
15 that's pretty high.

16 So, it's taxed much more heavily than the
17 denatured ethanol is. So, we just like
18 clarification in this Rule to allow MMTCs to use
19 that denatured ethanol. And we believe hemp
20 manufacturers are allowed to use denatured ethanol.
21 So, it would be equivalent.

22 Thanks.

23 COORDINATOR HAYES: Thank you.

24 Were there any further comments on that Rule?
25 (None heard.)

1 Next, we will be moving to Rule 64-4.221, MMTC
2 Seed-to-Sale Tracking System Integration. And we
3 will only be accepting comment on this Rule at this
4 time.

5 Joining the panel now is Joshua Sturms, OMMU
6 Project Manager.

7 Devin Baxter.

8 MS. BAXTER: Most of my comments on this Rule
9 go towards new MMTC's that might be coming online
10 in, you know, the next year or so. I think we need
11 to give them a reasonable timeline to integrate,
12 rather than requiring them to be fully integrated
13 at their first cultivation authorization. We
14 talked a little bit yesterday about what a tight
15 turnaround that can be.

16 And a lot of times if we're going to have to
17 integrate, they're going to put in a very simple
18 system just to get the job done, and then they're
19 going to have to go back and redo it a little bit
20 later. So, we'd like just a longer timeline during
21 their first licensure period for them to integrate.

22 On the incorporated form, which is the
23 inventory list form, I suggest allowing MMTCs to
24 tie their approved products to more than one route
25 of administration where that's possible. We don't

1 want to have to have multiple unique IDs for the
2 same product in order to dispense it via multiple
3 approved routes because that causes inventory
4 management issues.

5 And one other point I wanted to raise with
6 seed-to-sale integration is that we've noticed that
7 since integration has gone into effect, the weekly
8 report that the OMMU publishes, and everyone looks
9 at very anxiously, has accounted for low THC
10 dispensations differently.

11 I think a lot of people, and I heard a comment
12 earlier about how MMTCs are dispensing less low
13 THC. Part of that is attributable to how it's
14 showing up in the weekly report. I know I have
15 clients that are dispensing way more low THC
16 products, but it's not accurately reflected in that
17 report post integration. So, to the extent that
18 that report could be updated, I think that would be
19 helpful to everyone.

20 Thanks.

21 COORDINATOR HAYES: Thank you.

22 Christine Senne.

23 MS. SENNE: Good morning. Christine Senne
24 from the Florida Medical Marijuana Trade
25 Association.

1 The first thing I wanted to ask for is not
2 really something that can be adopted in Rule, but
3 it's actually a pretty serious issue for our
4 membership, so we wanted to raise it. Simplest way
5 I can put it is, can we get an undo button?
6 Because it's funny, but it's true. There are
7 certain phases in the current integrated system
8 where if you, you know, we have humans operating
9 these systems and sometimes a mistake is made.

10 But there are certain points such as at the
11 harvest where if you make a mistake that's a very
12 expensive and time-consuming mistake. You have to
13 actually go engage the operator of the system and
14 go through a lot of coding and back-end work in
15 order to reverse the error. And you can't really
16 move your inventory until that's done. We're
17 talking about days or weeks sometimes to fix just a
18 common human error. So, if you could work on that,
19 we'd be really grateful.

20 Back to the rules. We'd also like to
21 reiterate Devin Baxter's comments about allowing
22 more than one route of administration for tracking
23 in the STS system. There are issues with patients.
24 The statutes, when they talk about routes of
25 administration, only discuss that in the context of

1 physician recommendations to patients under
2 subsection four. And while the system is required
3 to be in place, different patients have different
4 needs.

5 And some products can be recommended for more
6 than one route of administration. We definitely
7 want to maximize that flexibility for patients, but
8 it is incredibly difficult to keep track of one
9 product, assigning multiple potential IDs to it in
10 order to allow for that flexibility for patients.
11 So, if we could have a little bit more flexibility
12 with our inventory tracking designations, we'd
13 appreciate that.

14 Thank you.

15 COORDINATOR HAYES: Thank you.

16 Were there any further comments on that Rule?

17 Next we will be moving to Rule 64-4.222 MMTC
18 STS Tracking System Procedures, and we will only be
19 accepting comment on this Rule at this time.

20 Devin Baxter.

21 MS. BAXTER: I've got quite a few on this one.
22 I'll try to go quickly.

23 I think one of the challenges of integration
24 has been that it impacts every MMTC differently
25 depending on the system that they use. So, they

1 all have unique problems.

2 And just to piggyback off of what Christine
3 was talking about, about needing an undo button.
4 If we have to go to Bio Track to ask for their help
5 to correct something, which we do often. Bio Track
6 charges for those, for help at different rates to
7 different MMTCs. So, it's a significant cost
8 anytime we have to bring Bio Track in to fix
9 something.

10 This year we've had a few extended MMUR
11 outages. One, we just want clarification. My
12 understanding of the Rule is that MMTCs during an
13 outage are allowed to continue to dispense in
14 accordance with their integration plan as long as
15 they back up the data and upload it at the end of
16 that period. We'd like that to be made clear in
17 the Rule.

18 And then we'd also suggest that the threshold,
19 you know, the time period that requires us to
20 notify the OMMU of an outage, is extended to six to
21 eight hours rather than the current two hours, just
22 to help us differentiate between planned
23 maintenance, unexpected outages.

24 Paragraph 13, which requires written
25 justification changes for changes in weight or

1 inventory accounts. We'd like that to be changed
2 to include a certain threshold that's deemed
3 meaningful, especially for larger MMTCs. They do
4 quite a few of these adjustments and it can become
5 pretty burdensome.

6 We'd also like the time window for that to be
7 extended to 48 hours, to make sure that we have
8 enough time to do an internal investigation and
9 identify the root cause before we decide whether we
10 need to make an adjustment and notify.

11 We'd like a little bit more clarity around the
12 open window process for new strains. I think MMTCs
13 are all doing it differently. So just a little bit
14 more clarity about when an open window needs to be
15 requested.

16 Sublotting the requirement that MMTCs sublot
17 batches has created a lot of issues and it prevents
18 MMTCs from transferring products directly between
19 stores. They're having to ship back to their
20 manufacturer and ship out. So, I don't think --
21 sublotting is a is a feature of Bio Track, but it's
22 not required to actually track and trace our
23 products. MMTCs have the capability to fully trace
24 products through without sublotting.

25 We'd like to add an MMTC facing user interface

1 for the state traceability system. I think this is
2 kind of the undo button that that Christine was
3 talking about. We have a lot of issues with having
4 to interface with Bio Track to get help whenever
5 there's an issue. We'd like to be able to control
6 things more directly through a user interface,
7 making data corrections, compliance management,
8 things like that.

9 We'd like patient transaction management
10 directly in the MMUR to be restored. So, if there
11 is a circumstance where a transaction is returned
12 and the patient is expecting that their allotment
13 is returned to them, there are scenarios where the
14 seed-to-sale vendor and Bio Track have to work
15 together on returning that product. It leaves the
16 patient, with a period of time where their
17 allotment is not returned to them. It's not
18 accurately reflected on their profile and the MMUR.

19 In the same vein, product returns.
20 Previously, stores were able to process returns
21 across any store. So, you can go to an MMTTC store
22 in Fort Lauderdale and purchase a product and then
23 maybe return it in Hollywood. But since
24 integration and implementation with Bio Track, that
25 functionality has been removed, which is very

1 frustrating for patients.

2 So they have to go back to the exact
3 dispensary that they purchased from, or the MMTC
4 has to create a workaround which is not ideal.
5 CMTLs are required to sample final products, but
6 for some MMTCs they're not able to create final
7 products in their system until after the lab
8 samples are created. So that's something we'd like
9 to see corrected. And then for some MMTCs,
10 manifests dispensable devices, not dispensable
11 devices, and dosed products are all required to be
12 placed on separate manifests, which is inefficient,
13 and it creates delays.

14 Thank you.

15 COORDINATOR HAYES: Thank you.

16 Christine Senne.

17 MS. SENNE: Hello. I'd like to go back to the
18 open window, which is a term that comes from Bio
19 Track. It's not defined anywhere in the Rule. And
20 yet there's a lot of expectations for compliance
21 with the open window process. So, if we could have
22 a definition in the rules for what is an open
23 window and also clarification for when, variances
24 are required to accompany open windows for some of
25 the MMTCs who use seeds.

1 They're being required to submit a new
2 variance request every time they want to add seeds
3 to their system, even if it's for a strain that was
4 previously approved. I think this goes beyond the
5 scope of what a variance is supposed to cover,
6 because you're talking about something that's
7 already been approved by the Department. We're
8 just asking to add things to our inventory
9 tracking.

10 So, if there could be some clarification and
11 some reduction in the number of variance requests
12 around the open window process, I think that would
13 make OMMUs lives a lot easier because it would
14 reduce your workload volume, and it would also make
15 it easier for the MMTCs to keep their business
16 operations going around adding new inventory. And
17 then in addition, we had -- nope. Those are the
18 two. So, thank you.

19 COORDINATOR HAYES: Thank you.

20 Jodi James.

21 MS. JAMES: Jodi James, the Florida Cannabis
22 Action Network.

23 I actually was planning on speaking more about
24 how the products are being tracked within the
25 system, which is why I put it here. I think

1 several of the other speakers have spoken quite
2 eloquently about the need to be able to divide some
3 of these products. Some of the MMTCs have ratio
4 products, and so if there is no way for that ratio
5 product to be put into both categories, then the
6 patient is losing some of their higher dose THC
7 allotment because the entirety of the ratio product
8 is being put under the singular allotment of the
9 regular THC. So that's really become an issue. We
10 have several doctors' offices here that are having
11 people come back to them. And then of course last
12 week the lawmakers were very concerned that they're
13 not seeing the allotment of that THC.

14 So, I think that's really the fix. I just
15 wanted to congratulate everybody on getting there.

16 Thank you very much.

17 COORDINATOR HAYES: Thank you.

18 Ryan from Healing Greene.

19 MR. FINGERHUT: Hi. Thank you. I would just
20 like to emphasize the comments made earlier,
21 several of them, including, having some time for
22 emergency situations, especially given some of the
23 storms that have been hitting us, and the area
24 recently. That's probably going to be needed.

25 I'd also like to speak to paragraph five,

1 which seems to limit the people who can integrate
2 with the tracking system to the vendors of the
3 MMTC, the OMMU and then the MMTC themselves. That
4 would seem to preclude a business associate
5 entities, which are entities which work in
6 traditional medicine, people who bring in AI
7 analysis, things of that that would look at the
8 metadata, of the traceability system and the POS
9 and, you know, bring novel items to patients.

10 This is something that's done, in HIPAA
11 compliant organizations all the time. There are
12 several alternatives that the OMMU could use,
13 including requiring approval of business associate
14 agreements, requiring certain data security
15 measures be taken so that patient data is
16 protected, while also allowing MMTCs to utilize
17 cutting edge medical technologies for their
18 patients.

19 Thank you.

20 COORDINATOR HAYES: Thank you.

21 Are there any further comments on that Rule?

22 MS. UBALDINI: Hello. Ashley Ubaldini here
23 with INSA. I have a couple comments.

24 First, I want to echo a lot of what Devin
25 said. Much of those things we have run into such

1 as needless delays because we don't have active
2 interface with Bio Track. Things like, needing
3 longer for communications when things happen.

4 Also, echoing what was discussed yesterday,
5 we'd like to see some clarity on the definition of
6 plant additives. I know that other licensees have
7 probably experienced this, but the feature for
8 entering plant additives for us was not even
9 developed until well after we had fully integrated.

10 So to kind of get around that with our seed-
11 to-sale systems, we would recommend removing the
12 requirement for entering additives into the seed-
13 to-sale tracking system and allow for a written log
14 of plant additives as an alternative that can be
15 reviewed during inspections or provided to the
16 Department whenever requested.

17 And echoing what both Christine and Devin said
18 about adjustments. Adjustment data, it's
19 transmitted to the Department through Bio Track.
20 We'd recommend removing the requirement altogether
21 for emailing the Department. Because this seems
22 like a needless redundancy. That said, if the data
23 is being utilized for another reason and we need to
24 continue collecting it, we would recommend to
25 extend that deadline, to 48 hours. And that's all.

1 Thank you.

2 COORDINATOR HAYES: Thank you.

3 Next we will be moving to Rule 64-4.20 - Oh,
4 sorry.

5 MR. GUNTHER: Sorry about that. Tim Gunther,
6 The Flowery.

7 Two things to reiterate. The state mandates
8 the seed-to-sale tracking system Bio Track and the
9 point that was made about calling for support. We
10 spent thousands of dollars charged by Bio Track to
11 try to fix integration issues, which is not fair to
12 -- most contracts in other states include support
13 for their licensees to be able to call the seed-to-
14 sale to get things fixed.

15 The other thing is, is when we do get a
16 dispensary or a location approved is if Bio Track
17 can be notified to set up the number for that site.
18 Because we have a unique number, we have to then
19 email Bio Track, wait a day or two to get that to
20 be able to deliver stuff to that location.

21 So, it'd be great if the state, when the
22 approval went through it went to Bio Track so they
23 can automatically make the unique identifier for
24 that location, instead of having to request it
25 separately. Just saving time on getting things

1 done.

2 Thank you.

3 COORDINATOR HAYES: Thank you.

4 Any additional comments?

5 (None heard.)

6 Okay, next we will be moving to Rule 64-4.223
7 Caregiver Background Screening and Request for
8 Close Relative Status. And we will only be
9 accepting comment on this Rule at this time.

10 Joining the panel now is Todd Schimph,
11 Communications Manager.

12 Carla Ashburn.

13 MS. ASHBURN: Good morning. Carla Ashburn. I
14 am from Central Florida. I run a clinic, and I
15 also am a member, secretary, of the Board of FLCAN.
16 So, the caregiver background, understanding that it
17 is for non-relatives and why we want it. It is
18 very cumbersome. While I understand, there's got
19 to be a way to streamline it. It takes a very long
20 time.

21 A lot of times it can be an actual caregiver
22 that is there for a terminal patient, that cannot
23 go get their medicine, and the documents that have
24 to be provided and then approved. It just takes a
25 very long time for that to happen.

1 There is a question as to why we're doing a
2 second, a level two background. You know, what if
3 somebody did something 20 years ago, you know. Is
4 there a timeline that, you know, I'm sure it
5 correlates with the law that we've enforced now
6 about if they, you know, anybody is intent to sell
7 trafficking.

8 You know, we put that in place now that they
9 will lose their license. I understand that. But
10 where is the cut off, you know, where's the cut
11 off? There's got to be a cut off. And somehow we
12 need to streamline that process for our patients.

13 Thank you.

14 COORDINATOR HAYES: Thank you.

15 Alex Johnson.

16 MS. JOHNSON: Good morning. I'm Alex Johnson.
17 I run a clinic, and I am a member of FLCAN. And I
18 want to second everything that Carla said.

19 And also, would like to be able to re-evaluate
20 the cost of the caregiver card. Typically when
21 these patients are in need of a caregiver, they are
22 terminal, you know, and may not be much longer.
23 And it's an additional \$75. Finances are tight.
24 That's a product that they could be having as
25 medication. And they're spending it just to be

1 able to get help to receive their medicine. So,
2 I'd like to be able to reevaluate the cost of the
3 card.

4 COORDINATOR HAYES: Thank you.

5 Were there any further comments on that Rule?

6 MS. JAMES: I'm going to, if I may?

7 Jodi James, Florida Cannabis Action Network.

8 The other thing that I would like you to
9 consider is pediatric caregivers. What we find is
10 that we often have one mom and one dad with several
11 children that might be using cannabis, and they're
12 going to have to get a caregiver card for each of
13 those children. So, if they've been approved as a
14 caregiver for children in their custody, one card
15 covering all the children, please. Okay. Thank
16 you very much.

17 COORDINATOR HAYES: Thank you. Were there any
18 additional comments on that Rule?

19 (None heard.)

20 Lastly, we will be moving to Rule 64-4.224,
21 Dosing and Supply Limits for Medical Marijuana.
22 And we will only be accepting comments on this Rule
23 at this time.

24 Jodi James.

25 MS. JAMES: For the record, Jodi James Florida

1 Cannabis Action Network.

2 We need to start over with this one. We need
3 to go right back to rulemaking and entirely start
4 over. If you look at the process, and I sat in a
5 room like this, there was no public comment. Some
6 of the people that were on the panel making these
7 decisions had limited cannabis experience.

8 My team has brought a white paper that we'll
9 leave for all of you, dealing with some of the
10 science and the things that patients are being
11 asked to sign in terms of that consent form. That
12 consent form puts us into a program. It has us
13 saying that we agree to things. Many times, we're
14 not agreeing, we're signing under duress, and then
15 we are placed into this system with rolling limits
16 that were created by people who at the time really
17 did not understand how people were going to be
18 using cannabis. The program was novice. I am a
19 consumer of flower. I like to shop on a deal. I
20 was told last night that one of the MMTCS has a
21 deal.

22 And when I went, I was told, oh, you can't buy
23 any more flower for five more days. So, I have not
24 gone and gotten an exemption to increase my amount
25 of flower. I spend five or six months a year out

1 of the state, and during those five or six months
2 of the year I do not exceed my flower limit. But
3 when I am in state, I am constantly bumping up on
4 the rolling limits.

5 People would say, well, you know, if you went
6 and bought your two and a half ounces, that should
7 last you for 35 days. Not all flower is created
8 equal. Not all amounts of flower are going to have
9 the same effects. I may be using terpenes from one
10 plant for one effect and terpenes from another.
11 And these were things that were not even
12 contemplated eight years ago.

13 So, Florida Cannabis Action Network is 27
14 years old. We sat in the room. No one from our
15 organization was invited to talk about this at the
16 time, and I would hazard to say that I had more
17 continuing medical education credits then as a non-
18 medical person because of having attended medical
19 conferences for two decades, than the people who
20 made decisions.

21 And I will tell you right now, one of the
22 people who sat on that panel was a recommending
23 physician who did not believe in THC as a medicine.
24 And these are the people who made decisions for the
25 900,000 people who are trying to use this and work

1 within the system. The reason you're getting so
2 many requests for exemptions has as much to do with
3 rolling limits that were arbitrarily determined.
4 So back to the basics on this one. I think this is
5 probably something our team led the scrap the caps
6 and, you know, all of these kinds of conversations
7 with us moving forward. I'd like to see this one
8 go back to the drawing board one way or another.

9 Thank you very much.

10 COORDINATOR HAYES: Thank you. Carla Ashburn.

11 MS. ASHBURN: Carla Ashburn again.

12 So, what I'd like to add, and I concur with
13 what Ms. James already said, but as a clinic owner
14 we see this daily. And not all of it is -- it's
15 definitely not always flower, right.

16 And two, as Ms. James point, people also cook
17 with it. You know, they've learned to make their
18 own tinctures. They've learned to, you know,
19 they're butter machines. There are edibles that
20 work for them. So that's what a lot of them use
21 their flower for. But then you have inhalation.

22 You have all the routes that we have people
23 that find. I have people that cannot digest
24 edibles. So, then they use other things. There
25 are reasons. And what I feel is it's taking away

1 from the doctor-patient relationship. If your
2 doctor -- my doctor is sitting down talking and we
3 document what they use, have they increased, how is
4 it, you know, how are the effects, and they agree
5 that they need more in a certain route, whether
6 it's flower, whether it's inhalation, then they're
7 being regulated by the OMMU as to whether they say
8 yes or no.

9 And then to that process it is cumbersome.
10 While I understand we need to know why the patient
11 needs it, why the doctor concurs, we have to --
12 until we can maybe take it back to rulemaking,
13 every seven months, we have to submit the same
14 exact information every time they come back 210
15 days. It's the same information.

16 We have to wait to get an exemption again. So
17 not every patient needs an exemption. But I think
18 that we need to take a better look at those ones
19 that do need it. And think about the doctor and
20 the patient have discussed it. And this is what
21 the doctor feels like that they need. So, thank
22 you.

23 COORDINATOR HAYES: Thank you.

24 Michael from The Flowery.

25 MR. SMUTS: Hey. Good morning. Mike Smuts

1 with the Flowery.

2 I think with many of the topics that got
3 brought up today, this is one that spans, not just
4 the production of edibles, and other products, but
5 also ties in to seed-to-sale tracking as well, some
6 of the complexities around that. But there are
7 many products that we offer patients here in
8 Florida that can span and be dispensed against
9 multiple routes of administration, specifically
10 edibles, inhalation, oral, sublingual and marijuana
11 in the form of smoking.

12 And there's very inconsistent daily dose or
13 monthly 35- and 70-day allotments across all these
14 categories. And it further ties into what some of
15 the comments were mentioned as far as the rolling
16 recommendation goes. And it becomes not only
17 complex on our end for seed-to-sale integration and
18 trying to run the business, but certainly complex
19 for patients understanding how to maximize their
20 allotment and what's recommended to them. I think
21 it also speaks to the ratioed products that some
22 folks have brought up. More uniformity would
23 benefit that. And the low THC versus full THC
24 dispensation rules.

25 Second to all this, I think, any consideration

1 that could be done for products that could be
2 combined together that are already previously
3 approved products in a multi-format approved
4 product. Certainly, across inhalation and smoking
5 infused hand rolls and pre-rolls, both products
6 are applied -- or excuse me. Are approved.

7 We've worked with many CMTLs that have shown
8 us how they could very easily report what they need
9 to report for both different approved product types
10 and create a COA that would reflect something that
11 lets people know exactly how to dose and what's in
12 it and all that kind of stuff. Thank you.

13 COORDINATOR HAYES: Thank you. Were there any
14 additional comments on that Rule?
15 (None heard.)

16 COORDINATOR HAYES: If there are no further
17 comments I would like to thank all of you for your
18 participation in today's workshop. We will be
19 accepting written comments and material until 5:00
20 PM, November 12th, 2025. Please submit your
21 written comments to OMMUrules@FLhealth.gov.

22 There being no further comments, I would like
23 to inform you that this workshop is closed.

24
25 (Thereupon, the meeting concluded at 9:45 AM.)

1 REPORTER'S CERTIFICATE

2
3 THE STATE OF FLORIDA
4 COUNTY OF MIAMI-DADE:
5

6 I, MARTHA SUTHERLAND-VIDAL, Court Reporter and
7 Notary Public, certify that this transcript is a true
8 and complete record of my notes.
9

10 I further certify that I am not a relative,
11 employee, attorney, or counsel of any of the parties,
12 nor am I a relative or employee of any of the parties'
13 attorney or counsel with the action, nor am I
14 financially interested in the action.
15

16 DATED on this 29th day of October 2025.
